[Urgent Partner Search for Eurostars Application - developing cloud platform software, conducting data analysis, and implementing AI solutions](#) (RDRTR20240306001)

Our project aims to address the growing demand for smart wearable technology that can improve both performance and health outcomes. By integrating fabric-integrated sensor technology into sports clothes, we aim to provide users with real-time feedback on their health and performance, helping them make informed decisions about their training and lifestyle. We aim to apply the Eurostars call closing on 14.03.2024.

[Development of 2nd-Life-battery storage systems with land-based charging infrastructure for retrofiting small to medium sized ferries to full electrical propulsion - partners for IRASME project sought](#) (RDRDE20240307011)

Two German based entities with a focus on R&D projects looking for a partner enterprise from Switzerland i. e. a shipyard or shipping company working in the field of passenger ferry construction or transportation. For a R&D project with the objective to develop a scalable and modular 2nd-life-battery storage and propulsion solution for the retrofit of small to medium sized passenger ferries. Aiming for application in IRASME programme.

[A Spanish SME is looking for partners for EUROSTARS-3 for the development of a system capable of finding unrelated financial instruments with a high degree of similarity in morphological-oscillatory behaviour based on the multivariate time series paradigm](#) (RDRES20240306005)

A Spanish SME specialized in the financial market is seeking partners with proven skills in Machine Learning and DevOps to develop a system capable of autonomously analyze, validate and choose appropriate financial instruments to be automatically integrated into algorithmic trading models to add uncorrelated assets with a high degree of similarity in morphological-oscillatory behavior, based on the paradigm of multivariate time series in order to improve unbiased risk management criterias.

[Urgent EUROSTARS partner search for development of innovative 'Off-Network' Smartphone App solution](#) (RDRAT20240304005)

An Austrian SME active in consulting and customization of hard- and software solutions has developed an innovative technology enabling mobile voice and data communications without depending on any external infrastructure ('Off-Network'). Within the frame of the Eurostars funding program it would like to further develop the technology to reach market maturity. It is searching for a software development company specialized in App development to jointly apply for a Eurostars project.

[A Belgian company specialised in the representation and distribution of food products is looking for producers of sauces and packaging materials](#) (BRBE20240228008)

The Belgian company is specialised in sales of food and non food products to mid sized companies, fast foods and restaurants. The company is looking for European producers of sauces and packaging.

[A Spanish plastic recycling specialist company is seeking a mechanical recycling plant capable of recycling polyamide 6 fishing nets, ropes, and gear, along with density-based separation of polypropylene, polyethylene, and polyamide \(TRES20240222030\)](#)

The sought-after technology entails a recycling plant capable of mechanically processing polyamide 6 fishing nets, ropes, and gear, as well as polyamide 66 materials, while also conducting density-based separation of polypropylene, polyethylene, and polyamide.

[Technology platform company looking for collaboration and partnerships with innovative sensor, wearable technology and diagnostic testing businesses with the objective of gathering health and social data \(TRGB20231113020\)](#)

UK based SME technology company developing a platform to manage health and social care of the elderly at home. Resulting outcomes from this project aim to extend autonomous living amongst the elderly; providing positive solutions to both older generations and wider social issues. Collaboration could include joint venture agreements, license agreements or service agreements with businesses in the innovative sensor, wearable technology and diagnostic testing market including data collection.

[Looking for partners for EIC Pathfinder from robotics or Artificial Intelligence, also e-health or cybersecurity \(RDRFR20240229010\)](#)

French engineering school based in Paris in partnership with several scientific laboratories is looking for SMEs to complete its consortium. SMEs should be coming from robotics or Artificial Intelligence AI sectors, but also e-health or cybersecurity. Applicants participating in EIC Pathfinder projects are typically visionary scientists and entrepreneurial researchers from universities, research organisations, start-ups, high-tech SMEs or industrial stakeholders interested in technological research and innovation. With its Pathfinder programme the EIC supports the exploration of bold ideas for radically new technologies. It welcomes the high-risk / high gain and interdisciplinary cutting-edge science collaborations that underpin technological breakthroughs
